

## **Welcome Chameleon Snow Leopard!**

I am using Mac OS X Snow Leopard ([10A432](#)) for the demonstration of all proceed.

### **— IMPORTANT —**

Follow every steps in that Video before proceed

**Click on the image to see the video**

**\*\*\*\*\* Post Installation \*\*\*\*\***

**Boot to the USB Installer**

**LEGACY BOOT :**

P0: Crucial\_CT275MX300SSD1

CD/DVD/CD-RW Drive

**USB Storage Device** ←

P1: WDC\_WDS250G1B0A-00H9H0

A0S0 KINGSTON SUV400S37240G

A0S1 KINGSTON SU300S37A240G

**UEFI BOOT :**

Windows Boot Manager

clover

UEFI: INT13(SATA,0x81)

**OTHER OPTIONS:**

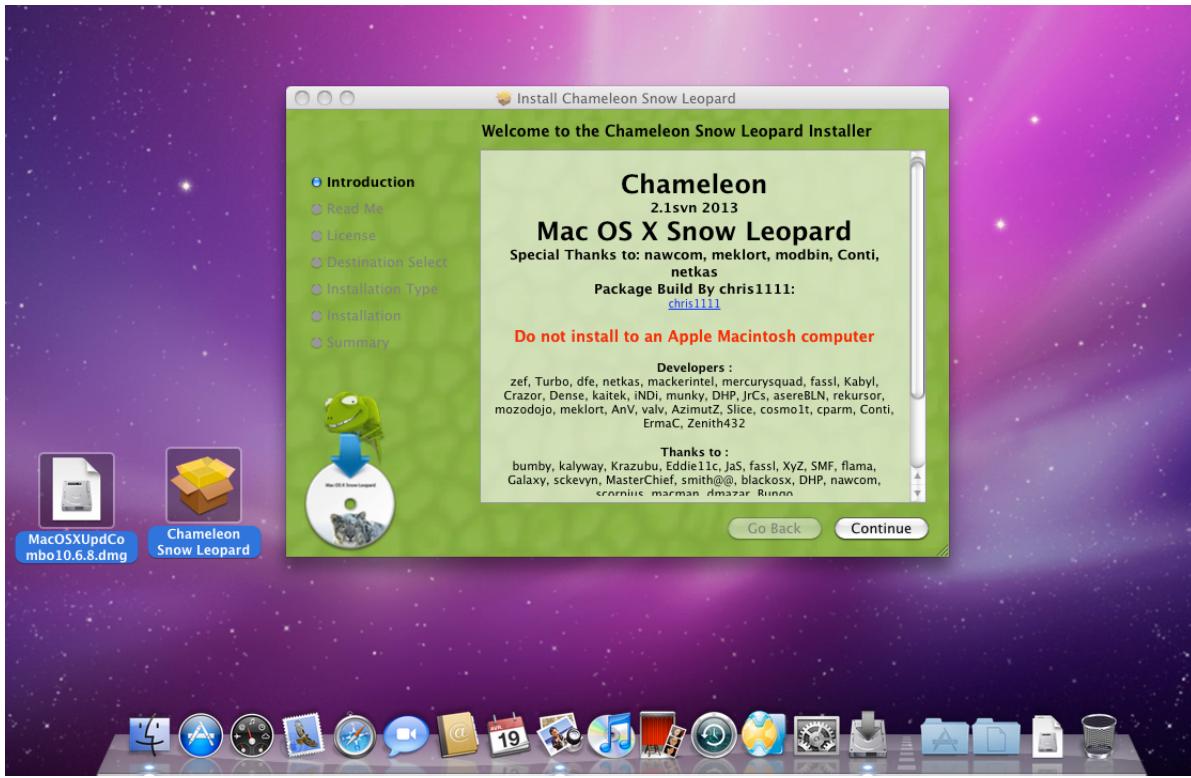

BIOS Setup

Diagnostics

**Boot in the Mac OS Installer**

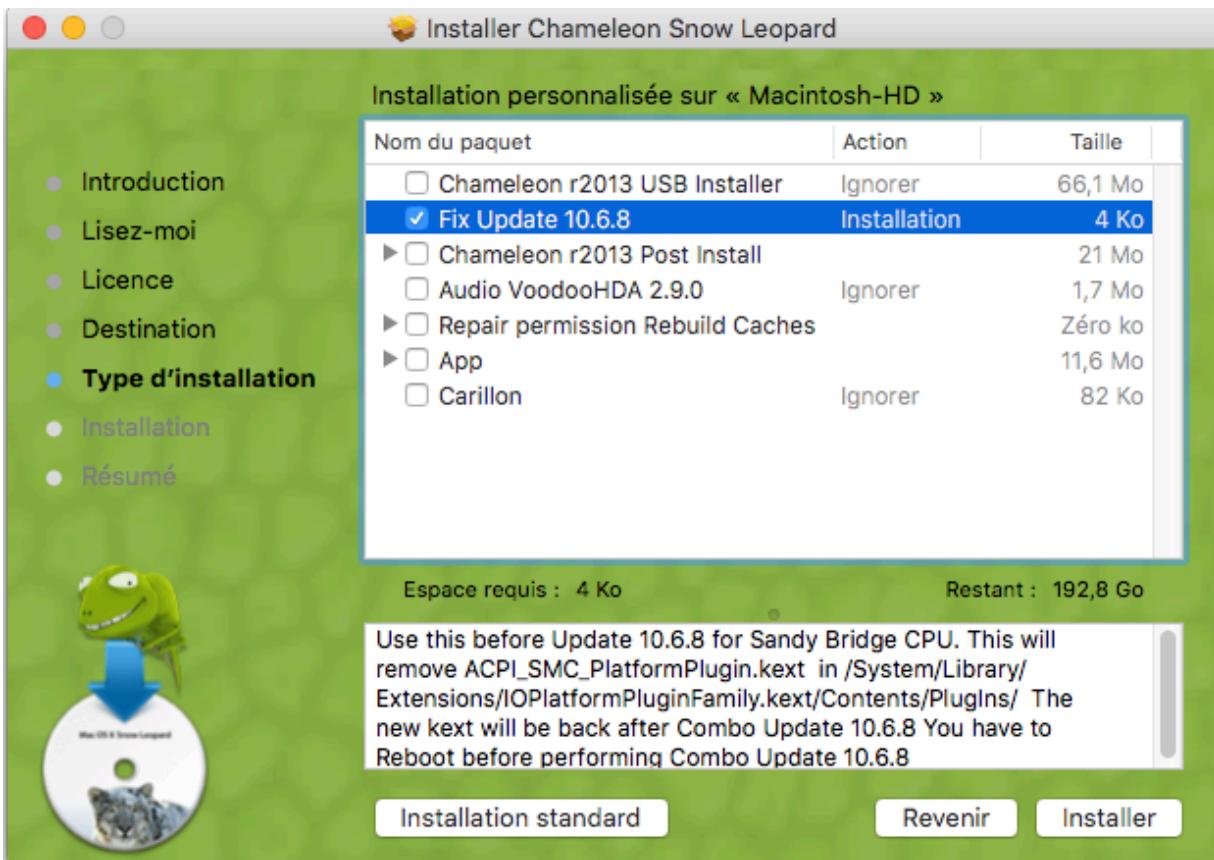

**Your on Mac OS X Snow Leopard Desktop**

If you have Sandy Bridge CPU do this step before installing Combo Update.

( If this is not the case, you can skip the next step )

### (Sandy Bridge CPU)

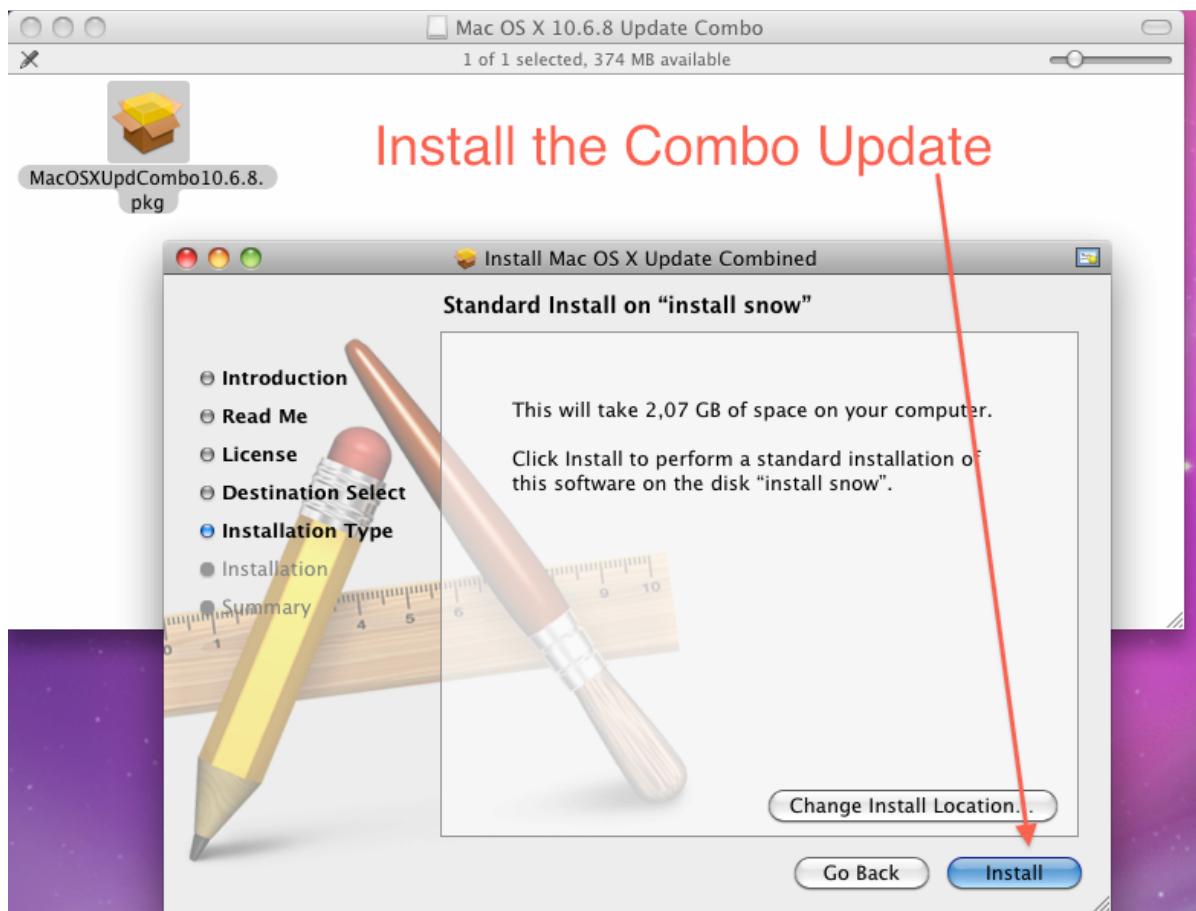

Select only this option! You have to reboot again with the USB and continuing the steps

---

### Final Steps Combo Update

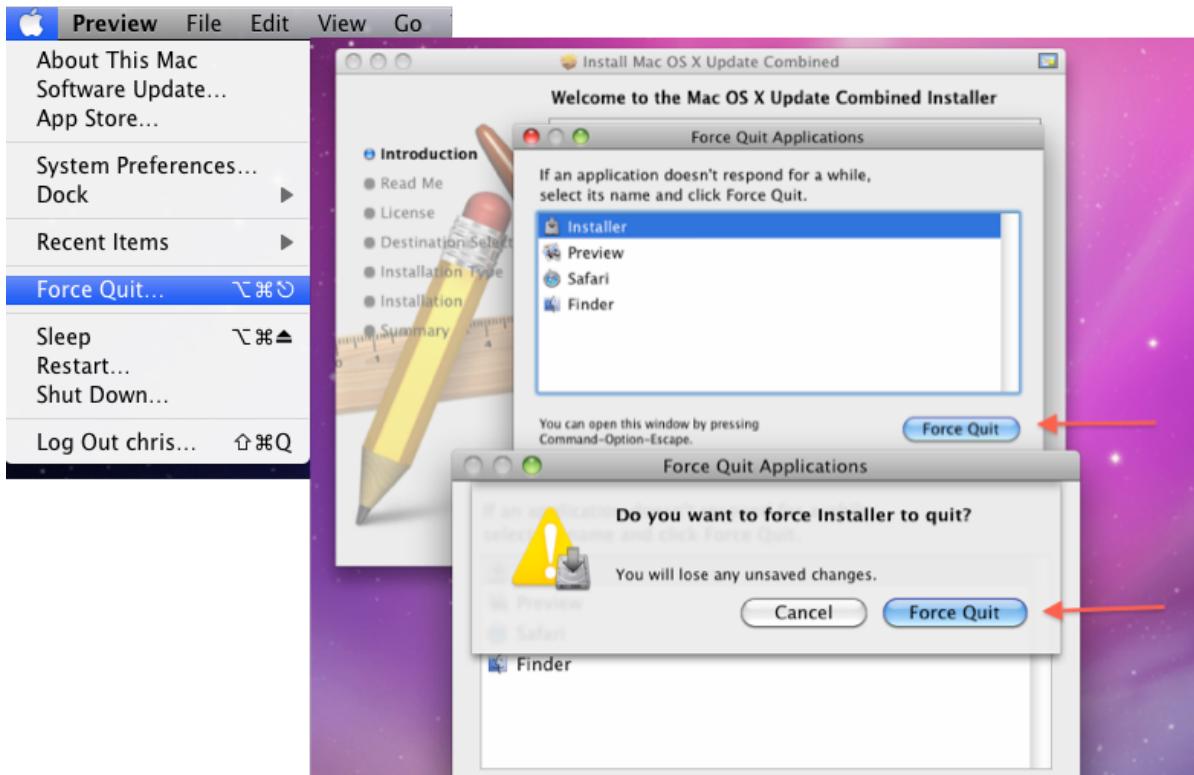

Install Combo Update 10.6.8

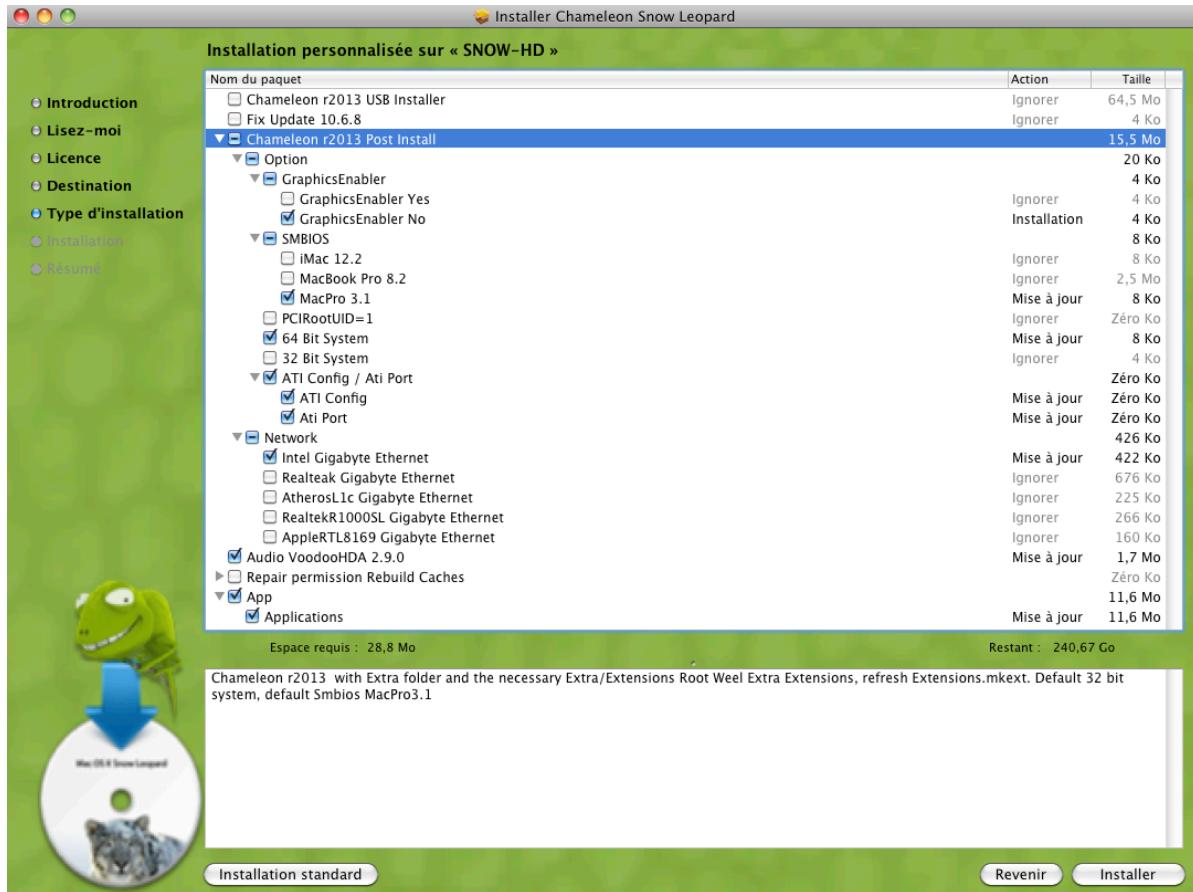

Dont Reboot !

**After installing Combo 10.6.8 , go to Apple Menue and select Force to quit**

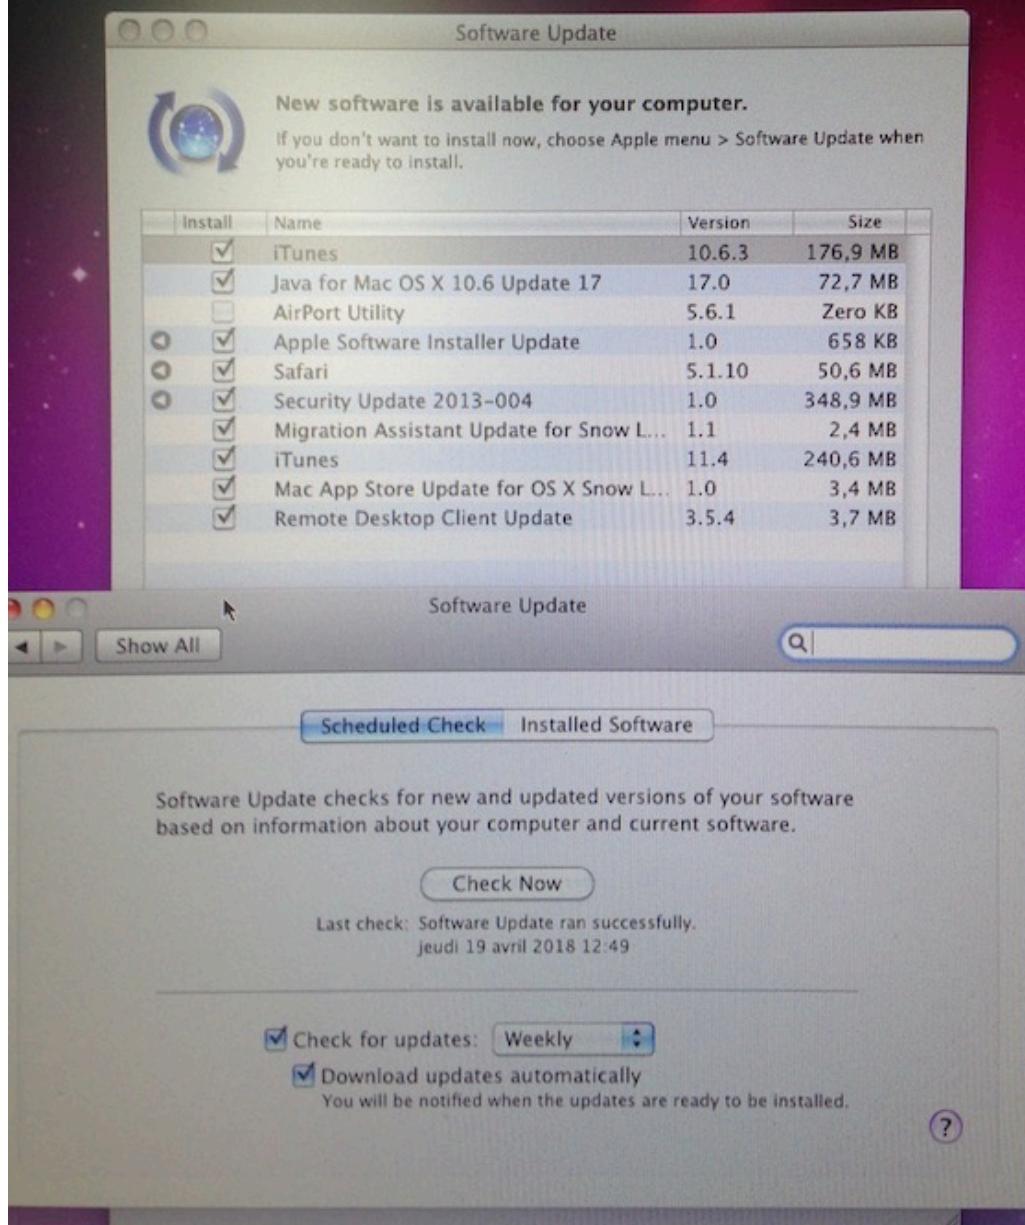

**Now complete Post Instalation  
( Here an exemple of my choices )**

**Reboot whit out USB , now the HD is Bootable ! Complet the final Update**

## After Combo update you have to Complete Final Update

**Reboot again**

**Enjoy Mac OS X Snow Leopard 10.6.8 Chameleon r2013**
